Writeup for E-mail IDs Validation Project:

Project Objective:

- To verify whether a given input string is a valid e-mail id match it with the following is the regular expression to match an e-mail id –

```
"^[a-zA-Z0-9+_.-]+@[a-zA-Z0-9.-]+$"
```

- Also, the Given Approach only works for String written in English language.
- Email validation is required in any of the application that looks for email addresses as required information at the registration stage.

Approach Used:

- Simplest regex to validate email.
- The regular expression **^(.+)@(.+)$** is the simplest regular expression the checks the @ symbol only. It doesn't care about the characters before and after the '@' symbol.
